Narrative

DATE/TIME: 2/3/2026 12:52 PM.

EXAM: CT CHEST WITH IV CONTRAST(CREATININE DRAW IF NEEDED).

CLINICAL STATEMENT: Malignant neoplasm of transverse colon, presenting for surveillance.

COMPARISON: 6/25/2025.

TECHNIQUE: Thin axial images of the chest were obtained after administration of 100 cc of Omnipaque 350 intravenous contrast. Sagittal and coronal reformats were also constructed.

FINDINGS:

Lines/tubes: interval placement of a right IJ approach chest port with tip in the right atrium.

Thoracic inlet: Unremarkable thyroid gland.

Lymph nodes: No supraclavicular or axillary lymphadenopathy. No hilar lymphadenopathy.

Redemonstration of enlarged right cardiophrenic lymph node, measuring approximately 1.8 x 2.5 cm (201:75), slightly decreased compared to prior 1.7 x 2.7 cm.

Heart/vessels: Normal size without pericardial effusion. No thoracic aortic aneurysm. Normal caliber pulmonary trunk without central pulmonary embolism.

Lungs/Airways/Pleura: Patent central airways.

No focal consolidation.

No suspicious appearing pulmonary nodules or masses are identified.

Pleura: Resolution of prior small bilateral pleural effusion. No pneumothorax or pleural effusion.

Upper abdomen: Please see concurrently dictated CT abdomen and pelvis with contrast from the same day.

Musculoskeletal: Stable right anterior chest wall subcutaneous 4 mm nodule. No acute fracture, dislocation or aggressive osseous lesions.
